

### **Main changes:**

- \* All code into "autoreduce" dir
- \* All packages that should be accessible from else where contain `__init__.py`
- \* Addition of "utils" package
- \* Change all package names to be lower\_snake\_case (pythonic)
- \* .travis.yml should be as simple as possible
- \* need a setup.py for package initialisation
- \* build scripts should be separate
